Karunya Kalkhundiya

AI/ML and Software Engineer Intern Candidate

karunya.kalk@gmail.com | +91 7013170637 | linkedin.com/in/karunyakalk | github.com/KarunyaKalk | karunyakalk.github.io

Summary

Final-year B.Tech CSE (AI/ML) student with strong data structures, algorithms and object-oriented design fundamentals, plus production full-stack experience (React.js, Node.js, MongoDB, REST APIs) from a live internship. Builds LLM-powered products end to end (agents, batched LLM pipelines, RAG) and treats model output as untrusted: each one ships with a verification layer or a deterministic fallback. Turns messy data into forecasts and plain-language insight for non-technical stakeholders.

Technical Skills

Languages: Python, Java, C++, JavaScript, SQL
CS Fundamentals: Data Structures & Algorithms, Object-Oriented Design, REST API Design, Distributed Systems, Agile
AI / ML: LLM APIs (OpenAI, Gemini), Agents, RAG Pipelines, Semantic Search (ChromaDB), Prompt Engineering, PyTorch, TensorFlow, Scikit-learn
Data: Pandas, NumPy, Matplotlib, Power BI, Predictive Analytics (Linear Regression), Data Cleaning & Profiling
Web & Backend: FastAPI, Node.js, React.js, MongoDB, PostgreSQL
Tools: Git, Docker, Playwright, AWS & GCP (exposure)

Experience

Full Stack Engineer Intern – Incise Technology **May 2025 – Jul 2025**
React.js, Node.js, REST APIs, MongoDB

- Root-caused a recurring deployment-pipeline failure (about 1 in every 4–6 releases) by reproducing it across service boundaries in a multi-service environment, and drove the fix to a stable 7–8 releases per week.
- Designed REST APIs for workflow automation and cross-service communication that gave other teams live project status, replacing manual check-ins.
- Shipped backend and frontend features for an enterprise project-management platform, delivering every committed feature each sprint in a cross-functional Agile squad.

Projects

Peachy – Autonomous AI Job Search Agent [GitHub]
Python, FastAPI, React, TypeScript, PostgreSQL, Playwright

- Built an autonomous LLM agent that aggregates job postings across multiple sources, scores each against a candidate profile and tailors resumes, backed by a fact-verification layer that blocks invented claims.
- Designed a human-in-the-loop pipeline with Playwright form automation across three platforms and a hard pause before submission.

Coinsy Finance – Personal Finance Tracker [GitHub]
Python, Pandas, SQL (PostgreSQL), FastAPI, React, LLM APIs

- Built a pipeline that extracts, cleans and validates transactions from bank/UPI statements in five bank formats, auto-categorizing spend via batched LLM calls with a rule-based fallback when the model is uncertain.
- Built a spend-forecasting module (linear regression over historical transactions) predicting next month's category-level spend; adopted beyond personal use by 5–6 classmates.

Riskline – DevOps Change Intelligence & Risk Analysis Platform [GitHub] **Dec 2025 – Present**
Python, FastAPI, React, SQL, ChromaDB, OpenAI/Gemini APIs *In progress*

- Shipped a working MVP that uses LLMs to translate deployment documentation between technical and non-technical language, closing a cross-team communication gap.
- Building RAG-based semantic search over historical incidents (ChromaDB) and an LLM log-analysis layer for risk scoring.

Personal Finance Insights Dashboard
React.js, Power BI, Python, Pandas, NumPy, Matplotlib

- Designed a Power BI-backed dashboard with a data model built to extend to multi-user reporting, and prototyped spending-pattern and anomaly-detection logic in Python that surfaced real concentration areas; users found it more useful than other finance apps they had tried.

Education & Certifications

B.Tech, CSE (AI/ML Specialization) – SRM University, Andhra Pradesh **Aug 2023 – Expected 2027**
CGPA: 7.7 / 10.0
SAP Certified – Generative AI Developer | Oracle Certified Professional – Java SE 17 Developer

Leadership

- **Co-Lead, Google Developers Group (GDG-SRMAP):** led technical workshops and developer education, hosted the AI workshop, and promoted the Code4Her mini-hackathon to 100+ team registrations in 3 days.
- **Team Lead, AISECS Hackathon (4th place);** Vice Chair, Model United Nations (2 conferences).
