Summary

Final-year B.Tech CSE (AI/ML) student who pairs product discovery with the technical depth to build. Changed a product's direction after interviewing 25 users, turned a crowded market into one positioning line, and shipped production code as a full-stack intern. Also writes the script and hosts the room: hosted a college fest stage for about 400 people and promoted a hackathon to 100+ team registrations in 3 days.

Core Skills

Product: Product Discovery, User Interviews, Competitive Analysis, Requirements & Specs, MVP Scoping, RICE Prioritization, Wireframing, Agile/Scrum, Cross-functional Collaboration
Marketing & Communication: Positioning, Brand Voice, Campaign & Event Execution, Community Building, Scriptwriting, Public Speaking
Technical: Python, SQL, JavaScript, React.js, Node.js, FastAPI, REST APIs, MongoDB, PostgreSQL, LLM APIs, RAG, Git, Docker, AWS
Tools: Figma, Notion, Claude, ChatGPT, Canva

Product & Positioning

Navira – Adaptive Life Companion [Manifesto] **In progress**
Product Management capstone: discovery, positioning, brand voice

- Interviewed 25 students to test my first hypothesis and dropped it: the real blocker was decision fatigue, not lack of motivation.
- Ran a competitive teardown of 8+ productivity tools (Notion, Todoist, Motion, Sunsama, TickTick, Structured, Akiflow, Finch), RICE-prioritized the gaps, and defined the differentiator in one line: "reduce the next decision."
- Created wireframes, design principles and a brand voice guide that now govern feature decisions and the product's messaging.

Product Builds

- **Coinsy Finance** [GitHub]**:** personal finance tracker that reads bank and UPI statements in five formats, categorizes spend with LLMs and forecasts category-level spend; adopted by 6 classmates beyond personal use, who rated it more useful than other finance apps they had tried.
- **Peachy** [GitHub]**:** designed an agentic workflow that scores job postings against a candidate profile and tailors resumes via an LLM API, with a fact-check layer and human review before anything is submitted.
- **Riskline** [GitHub] **(in progress):** MVP where an LLM translates deployment documentation for non-technical stakeholders; adding LLM risk scoring and RAG search over past incidents.

Experience

Full Stack Engineer Intern – Incise Technology **May 2025 – Jul 2025**
React.js, Node.js, REST APIs, MongoDB

- Fixed a recurring deployment failure (1 in every 4–6 releases) by tracing the root cause across service boundaries; with the team, restored 7–8 releases per week.
- Improved cross-team visibility by designing REST APIs that gave other teams live project status, replacing manual check-ins.
- Delivered every committed feature each sprint in a cross-functional Agile squad (planning, standups, stakeholder updates).

Community, Hosting & Marketing

- **Co-Lead (earlier Host), Google Developers Group, SRM-AP:** hosted 4 chapter events; promoted the Code4Her hackathon in 3 days to 100+ team registrations; added a slot-release rule (absent pre-registered teams give their slot to walk-ins after 15 minutes); 6 delegates came to evaluate projects; about 300 students now want to join the chapter.
- **Host, Infinitus (college fest), 2 years:** main stage for about 200 people in year one and about 400 (a full auditorium) in year two; interviewed guests beforehand, wrote my own scripts and improvised off them to keep the crowd engaged.
- **Co-Convener, Gender Championship Community:** co-ran the chapter's first Gender Championship; added anonymous games to get a hesitant audience talking. **Vice Chair, Model United Nations** (2 conferences). **Team Lead, AISECS Hackathon** (4th place).
- **Published author** of *The Wild Soul*; co-author of multiple anthologies.

Education & Certifications

B.Tech, CSE (AI/ML Specialization) – SRM University, Andhra Pradesh **Aug 2023 – Expected 2027**
CGPA: 7.7 / 10.0
Master Product Management by Actually Building a Product – Udemy (in progress)
SAP Certified – Generative AI Developer | Oracle Certified Professional – Java SE 17
